

A specimen must be collected on 3 separate days over a 2 week period.

ie: Day 1, Day 4, Day 8

(SOME Centres are open Saturday mornings).

No special dietary restrictions apply.

### Equipment:

3 brown topped jars

### Procedure:

For this test it is preferable to collect specimens from separate bowel motions on separate days, place a small amount of the faeces in the container.

The container must then be delivered to the collection rooms as soon as possible on the day of collection.

If there is a delay, the specimen should be refrigerated and delivered to collection rooms later in the day.

Repeat the procedure on day 4 and day 8.
